

TOP 10 POINTS TO REMEMBER

Module 2 – Plant Physiology and Cannabis Cultivation

1. There are over 100 types of cannabinoids. The ones most commonly known are THC and CBD.
2. The terms “Indica” and “Sativa” refer to the regions where a particular strain may have originated from; the terms do not accurately describe the effects one strain may have on the body.
3. A uniform canopy means a more consistent cannabinoid profile across the crop.
4. Terpenes are organic essential oils that effect the smell of the plant and have their own pharmacological effects.
5. Cannabis is a short day, long day, or day neutral plant.
6. A plant that is under watered might wilt. This wilt is a sign of (abiotic stress/biotic stress)
7. A New Jersey cannabis cultivator shall only produce cannabis only at the cannabis business premises authorized in the license, including any indoor or outdoor areas.
8. Usable cannabis shall be: well cured and free of seeds and stems, free of dirt, sand, debris or other foreign matter; and free of mold, rot or other fungus or bacterial diseases.
9. A cannabis cultivator shall only package usable cannabis, and such packages may contain no more than $\frac{1}{4}$ oz or 7.09 grams.
10. Cultivators shall maintain records identifying the source of each ingredient used in the cultivation of cannabis.
